

Amendments to the Claims:

This listing of claims will replace all prior version, and listings, of claims in the application:

1. (currently amended) A pack of barriers for use in relation to an eye contacting optical testing apparatus, comprising a first backing sheet on which are removably attached a plurality of barriers of substantially transparent film each having dimensions comparable to those of ~~[the]~~ an eye-contacting surface of a head of a probe of the optical testing apparatus, ~~[the]~~ a surface of the substantially transparent ~~[material]~~ film adjacent the first backing sheet being sterile and the alternative surface of the substantially transparent film being provided with a peelable adhesive, and a second backing sheet to which the plurality of barriers and the first backing sheet are adhered by the peelable adhesive.
2. (currently amended) A pack of barriers as claimed in claim 1 wherein the first backing sheet is provided with locating means for locating the head of the probe of the optical testing apparatus.
3. (original) A pack of barriers as claimed in claim 2 wherein the locating means comprises coloured markers.
4. (currently amended) A pack of barriers as claimed in claim 3 wherein the locating means comprises a series of coloured rings each ring having a perimeter substantially coincident with that of the head of the probe of the optical testing apparatus.
5. (currently amended) A pack of barriers as claimed in claim 1 wherein the first backing sheet is provided with weakened lines to enable a portion of the first backing sheet surrounding one or more barriers to be removed by tearing of

the first backing sheet along the weakened lines.

6. (currently amended) A pack of barriers as claimed in claim 5 wherein the weakened lines are provided in the form of perforations.
7. (previously presented) A pack as claimed in claim 1 wherein each barrier is provided with one or more tabs for easy removal of the barrier.
8. (original) A pack as claimed in claim 7 wherein the tabs are provided with an adhesive substance for retaining the barrier onto the head of the probe.
9. (currently amended) A sheet of barriers for use in relation to an eye contacting optical apparatus comprising a plurality of pieces of substantially transparent material removably attached to a backing sheet, the pieces having dimensions substantially similar to those of ~~[the]~~ a probe head of the eye contacting optical apparatus, the pieces having at least one sterile surface being in contact with the backing sheet, ~~[whereby]~~ wherein the backing sheet ~~[may be]~~ is removed from each piece to reveal the sterile surface.
10. (original) A sheet of barriers as claimed in claim 9 wherein the surface of each piece of substantially transparent material opposing the at least one sterile surface is provided with a peelable adhesive.
